DETAILED ACTION

The amendment filed on September 17, 2002, amending claim 1 and canceling claims 4 and 9-65, has been entered.

Claims 1, 3, and 5-8 are pending.

Rejections and/or objections not reiterated from previous Office action are hereby withdrawn.

Information Disclosure Statement

The information disclosure statement (IDS) submitted on November 18, 2002 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 1 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Art Unit: 1652

Claim 1 is drawn to a modified *Renilla* luciferase having any recognition sites cleavable by any protease. Since there is no limit to structure of the polypeptide, these claims are drawn to a genus of polypeptides of unlimited structure described by the function of having a decrease luciferase activity upon cleavage by a protease.

Therefore, the specification fails to describe other representative species by identifying characteristics or structural properties other than the functionality of being a polypeptide cleavable by a protease, wherein cleavage results in a decrease in luciferase activity.

Given this lack of description of the representative species encompassed by the genus of the claims, the specification fails to sufficiently describe the claimed invention in such full, clear, concise, and exact terms that a skilled artisan would recognize that applicants were in possession of the inventions of claim 1.

Claim 1 is rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a *Renilla* luciferase substituted with a recognition sites recited in claim 3 at residues 197-200 of SEQ ID NO:2, does not reasonably provide enablement for luciferases substituted with an unknown recognition site at residues 197-200. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims.

Factors to be considered in determining whether undue experimentation is required are summarized in In re Wands 858 F.2d 731, 8 USPQ2nd 1400 (Fed. Cir. 1988). They include (1) the quantity of experimentation necessary, (2) the amount of

direction or guidance presented, (3) the presence or absence of working examples, (4) the nature of the invention, (5) the state of the prior art, (6) the relative skill of those in the art, (7) the predictability or unpredictability of the art, and (8) the breadth of the claims.

The specification teaches various recognition site that can be substituted at position 197-200 of SEQ ID NO:2 wherein cleavage by a protease results in a decreased luciferase activity. But the claims are drawn to a modified luciferase having any recognition site cleavable by any proteases.

Therefore, one of ordinary skill would require guidance in order to make a modified luciferase substituted with any recognition sites at residues 197-200 in a manner reasonable correlated with the scope of the claims. Without such guidance, the experimentation left to those skilled in the art is undue.

Allowable Subject Matter

Claims 3 and 5-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
